SNOWDON TOWERS | ZONE SELECTION

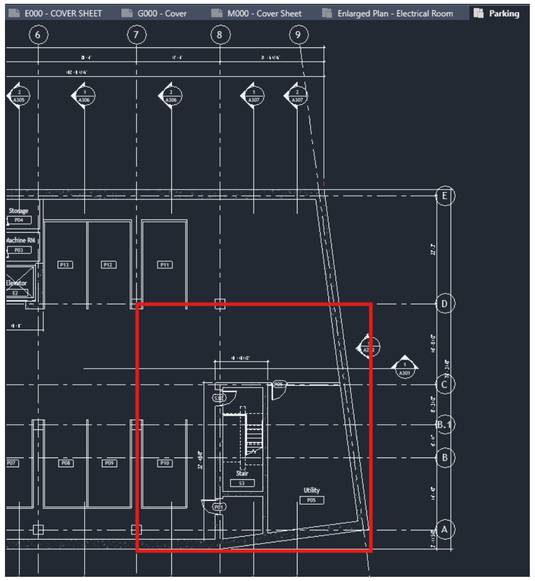

S03 - Electrical VDC capstone study area

Grids 7-9 / A-D

Primary focus: 8-9 / A-C

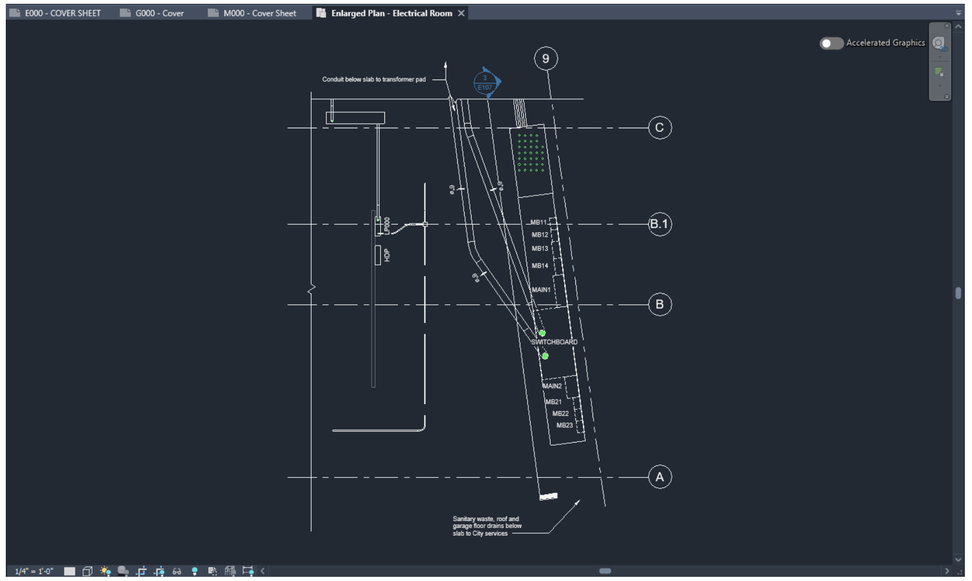

01 PARKING | ARCHITECTURE

Utility P05, Stair S3, and the east parking circulation area

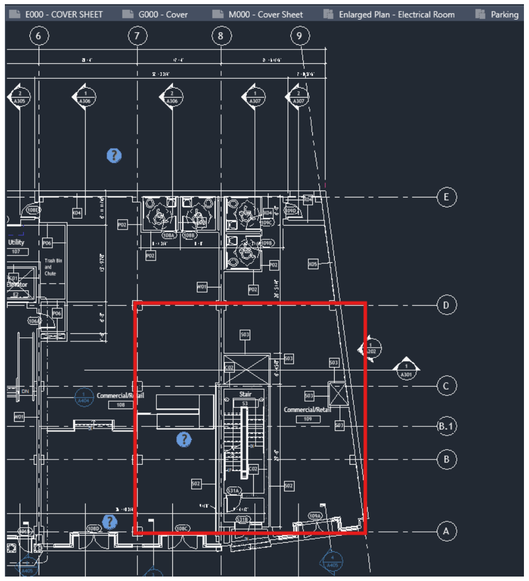

02 PARKING | ELECTRICAL DETAIL

Reference switchboard, panels, and incoming conduit route

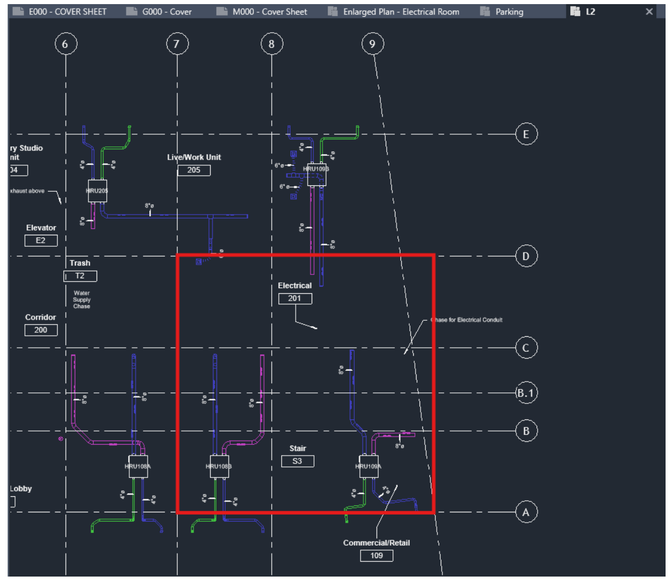

03 LEVEL 1 | ARCHITECTURE

Retail 109 and Stair S3 within the selected vertical slice

04 LEVEL 2 | MECHANICAL

Duct runs and the labeled electrical conduit chase overhead

WHY THIS AREA

We picked this area because the main electrical gear is in Utility P05, with Retail 109 above it. The parking level alone looked pretty empty, but the plans show ducts and a conduit chase higher up that we may need to route around.

Part of Level 2 is open to the space below. We'll check the actual heights in 3D before calling anything a clash.

Planning reference: Autodesk Snowdon Towers sample models. Exact routing, elevations, and actual clashes require 3D review in S04 and later.
